

Product Requirements Document — CRAZYWORK Storefront Rebuild

Project	CRAZYWORK — Gym & Lifestyle Apparel Storefront + Admin
Prepared for	Crazywork (client)
Prepared by	Zedech Solution
Date	2026-06-08
Current site	https://crazywear-jioq6vwp.manus.space (Manus-hosted)
Target	Vercel + Neon, custom domain
Status	Draft for review

1. About This Document

This PRD describes **what** we will build, **how** each piece works, and **what ships in v1** versus **what is part of future extensions** (and *why*). The current site was generated on the Manus platform and is welded to Manus-only services. This project migrates it to a self-owned stack on Vercel, overhauls the UI toward a clean, light storefront, adds a real admin panel, and implements the client's change list.

Read this as a discussion document. Anything that doesn't match intent, flag it and we adjust.

2. Problem Statement

From the client's perspective:

- The store runs on Manus, a closed platform. The client cannot fully own, host, or scale it, and the product catalogue is **hard-coded** — the client cannot add a product, change a price, edit a description, or mark stock without a developer.
- There is **no real admin panel**. Order viewing is locked to the Manus app; the client cannot manage products, stock, content, or settings independently.

- The current UI does not meet the bar the client wants (reference: **Gymshark**, secondary: Adidas, Nike, Lululemon).
- The client wants new capabilities: a **gym-collaboration blog**, **community photos**, **FAQs**, **size guide**, a **first-purchase 10% email-capture offer**, **guest + account checkout**, **Discord alerts** on new orders, configurable social links, and an **SSM listing** in the footer.
- SEO is weak — the current SPA is client-rendered, so product and content pages are poorly indexed.

3. Solution

From the client's perspective: a fast, polished, self-owned CRAZYWORK store the client controls end-to-end.

- A new storefront on **Next.js + Vercel**, restyled to a **light, clean theme** on the brand's light/peach + burnt-orange identity.
- A **single-superadmin admin panel** to manage products, stock (per size + colour), drops, orders, blog posts, community photos, FAQs, and site settings — no developer needed for day-to-day changes.
- Customers can buy as **guest or registered account**, pay by **card / FPX / GrabPay** (Stripe), and registered customers can see order history and status.
- Marketing built in: **10% first-purchase email capture**, **order-confirmation emails**, and a **new-order alert to the owner via Discord or email (client's choice — one channel)**.
- A **gym-collaboration blog** and **community photo wall**, both SEO-friendly via server rendering.

Approach: port, not from-scratch

We **rebuild the application shell** on Next.js while **reusing** the existing React component library (shadcn/Radix), brand tokens, and business logic. We **replace** the Manus-coupled platform layer and the MySQL database, and **delete** all Manus `_core` services.

4. Locked Decisions

Decision	Choice
Build strategy	Next.js (App Router) port — reuse components + logic, restyle pages
Repo	Fresh Next.js repo ; copy reusable components/logic from the Manus repo (no in-place migration)

Decision	Choice
Hosting	Vercel
Database	Neon Postgres (free tier)
ORM	Prisma (Zedech house standard)
API layer	Hono (runs as a catch-all route handler in Next.js; type-safe <code>hono/client</code>)
Auth	Better Auth for the whole app — customers (email/password + Google social), guest checkout, and a single seeded superadmin -role user (admin role not self-assignable; no admin signup)
Payments	Stripe — Cards + FPX + GrabPay (all three confirmed supported for MYR via Stripe Checkout) now; Touch 'n Go aggregator as a future extension. Built against Stripe test mode (sandbox) during development; live keys + live webhook wired at launch.
Stock model	Per size + colour variant
Drops	Drop-based grouping (Current / Past / Sold-out)
Data migration	Start fresh , re-host product images to Vercel Blob
Image / file storage	Vercel Blob
Email	Resend
Order alerts	Per new paid order via either Discord webhook OR owner email — client picks one, and only that one is built (not both). Suggested: Discord (instant push, no inbox flooding during drops)
Admin recovery	Email/password + emailed reset link to a locked owner email
Guest tracking	Public order-lookup page (order number + email)
Order management	6 statuses + courier/tracking number + auto status-change emails
Shipping	Flat West/East Malaysia rates , free over a threshold, configurable in admin
Pages	Keep all current pages (Home, Shop, Drops, Mindset, Our Story); add FAQ + Collab + Community (real customer photos, per client PDF)

Decision	Choice
Collab page	Single admin-configurable showcase page (title, intro, gallery, body)
Theme	Light / white + Peach Beige #faefe0 + Burnt Orange #d45c00 accent

Neon free tier sizing

The free tier (0.5 GB storage, ~190 compute-hours/month) is **far more than enough** for this store's data (a handful of products, orders, customers, content). Only caveat: free-tier compute **auto-suspends** after inactivity, adding a ~few-hundred-ms cold start on the first request after idle — invisible for low-traffic retail. Upgrade to the \$19/mo Launch plan only if always-on is ever required.

Infrastructure cost (monthly)

Service	Plan	Cost
Vercel	Hobby (free) during build + pre-launch; revisit at go-live	\$0 now
Vercel Blob	Hobby free allotment now	~\$0 at this scale — optimized WebP well under 1 GB, CDN-cached (cache hits free)
Neon Postgres	Free	\$0
Resend	Free tier (3,000 emails/mo)	\$0 at launch volume
Stripe	pay-per-transaction	per-txn fees only, no monthly

For now: \$0/mo — everything runs on free tiers while there's no commercial traffic. **Domain is the only upfront cost (~RM40–60/yr).**

At go-live (when the store starts taking real orders / a drop is announced), decide the host — Vercel Hobby is non-commercial per Vercel's ToS and can be throttled/suspended once it shows payment activity, so move to one of:

- **Vercel Pro** — ~\$20/mo/seat. Best Next.js DX; keeps Blob.
- **Railway / Render** — ~\$5–7/mo, commercial allowed, no per-seat; can host app + DB.
- **Cloudflare Pages / Fly.io / self-host (Hetzner + Coolify)** — cheapest, more setup.

The app is **host-agnostic** (plain Next.js + Prisma + Neon); only Vercel Blob is Vercel-specific, and it can be swapped for **Cloudflare R2 / S3 / UploadThing** if we move off Vercel. This cost is **client-billable** (pass-through hosting), not absorbed by Zedech.

Stripe environments

Development is built and tested entirely against **Stripe test mode (sandbox)** — test API keys + `stripe listen` for local webhooks. **Live keys and the live webhook endpoint are wired only at launch**, after the client's Stripe account passes KYC and FPX/GrabPay are enabled in the Dashboard.

5. Brand & Design Direction

Identity (from brand kit):

- **Colours:** Peach Beige `#faefe0` (primary bg), Near Black `#1a1a1a` (text/logo), **Burnt Orange** `#d45c00` (accent — used sparingly), Soft Sand `#f0e8dc`, Warm Grey `#c4b5a3` (borders), Muted Brown `#7a6a5a` (secondary text). Max three colours per layout.
- **Type:** Barlow Condensed (Black 900 / Bold 700) for logo, headlines, product names; Barlow (400/500) for body and UI.
- **Imagery:** dark, cinematic, film-grain, single-subject, authentic effort — note the deliberate tension of dark product photography on a light peach UI.
- **Voice:** raw, direct, community-first, quietly confident. All-caps brand name always.

UX direction: a light, clean theme — clean grid, generous whitespace, large imagery, sticky add-to-cart, refined PDP, size guide. Informed by modern athletic-wear stores (Gymshark, Adidas, Nike, Lululemon) for navigation and PDP patterns.

6. Architecture & Tech Stack

- **Frontend:** Next.js 15 App Router, React 19, Tailwind 4, reused shadcn/Radix ui/* components, framer-motion. SSR/SSG for storefront, product, and blog pages (SEO); client components for cart/interactivity.
- **API:** Hono mounted at `app/api/[...route]/route.ts` via `hono/vercel`; end-to-end types to the client through `hono/client`.
- **Data:** Prisma ORM against Neon Postgres (pooled connection for serverless).
- **Auth:** session-cookie auth. One seeded superadmin row (hashed password, env-seeded); customers use email/password; guests checkout with email only.
- **Payments:** Stripe Checkout (hosted), webhook route handler to confirm payment and finalize orders.
- **Email:** Resend (transactional: OTP discount, order confirmation, owner alert).

- **Alerts:** Discord incoming webhook (URL stored in `siteSettings`, configurable in admin).
- **Storage:** Vercel Blob for all uploads (product images, blog covers, community photos).
- **Deleted from current code:** all `server/_core/*` Manus services (OAuth, notification, dataApi, storageProxy, imageGeneration, llm, voiceTranscription, map), Manus Vite runtime plugins, MySQL/Drizzle layer, Wouter.

7. Data Model (Modules / Tables)

Table	Purpose / key fields
user / account / session / verification	Better Auth-managed tables. <code>user</code> carries name, email, image, plus app fields: role (<code>customer</code> <code>superadmin</code>), phone, address. <code>account</code> holds password + linked Google social. Single <code>superadmin</code> = one seeded <code>user</code> with role <code>superadmin</code> (role not self-assignable).
product	slug (unique), name, description, category, basePrice, isNew, isLimited, status (active/draft), dropId, SEO fields.
productVariant	productId, size, colour, stock , sku. Stock tracked at this grain.
productImage	productId, blobUrl, alt, sortOrder.
drop	name, slug, status (current/past/soldout), sortOrder. Groups products for "previous drops" browsing.
order	customer fields, shipping zone + shippingFee , totalAmount, status (pending→paid→processing→shipped→delivered→cancelled), paymentMethod, discountCode, orderNote (customer free-text request), courierName + trackingNumber , placedAt.
orderItem	orderId, productId, variant (size/colour), unit price, quantity. (Normalized out of the current JSON blob.)
discountCode	code (unique), email, percentage, used flag, expiresAt. One per email; backs both popup capture and account-signup welcome.
emailSubscriber	email, source (popup/signup), createdAt.
collabPage	single configurable record: title, intro, body, gallery (blob URLs), published. The Collab showcase page.
communityPhoto	blobUrl, caption, sortOrder, published. Real-customer photos for the Community page.

Table	Purpose / key fields
faq	question, answer, category, sortOrder, published.
siteSettings	key/value: social links, SSM number , Discord webhook URL, owner-alert email, shipping rates (West/East/threshold) , popup timing , announcement bar, configurable product links.

8. Modules — v1 Scope, May-Be Future Extensions (with Why), Defaults

Each module is described in three layers: **v1** (ships now) · **May be part of future extension** (*candidate* work beyond v1 — possibilities, not commitments — each with the reason it's needed and why it's out of v1) · **Defaults** (choices Zedech sets for speed; client can override).

8.1 Storefront Pages

- **v1:** Home (hero, marquee, featured drop), Shop (grid + filter/sort), Product Detail (PDP), Cart, Checkout, Payment Success, Customer Auth, Customer Orders + Profile, Our Story, Mindset (restyle/keep), FAQ, Collab, Community, 404. Restyled to a light, clean theme on the light/peach identity. **Clicking a product opens straight at the product** (no scroll-up — fixes client complaint). Quick view replaced by **"Add to Cart."**
- **Sticky add-to-cart bar (v1):** when the shopper scrolls down/away on a PDP without adding to cart, a sticky bar appears with the product, **size + colour selectors**, and an **Add-to-Cart button** — so they can pick a variant and add without scrolling back up.
- **May be part of future extension — Wishlist / favourites.** *Why needed:* lifts repeat-purchase and lets the client see demand signals. *Why it's not in v1:* not on the client's must-have list; adds auth-bound state and UI not required to transact.
- **May be part of future extension — Product reviews & ratings (real).** *Why needed:* social proof raises conversion. *Why it's not in v1:* needs moderation + verified-purchase logic; current ratings are static and fine for launch.
- **Defaults:** Mindset and Our Story pages kept and restyled rather than removed (cheap, on-brand content surface).

8.2 Product & Stock Management (Admin CRUD) — v1 core

- **v1:** Superadmin can create / edit / delete products; manage **per size + colour variants with stock counts**; upload/reorder/delete product images; edit descriptions, price, category, badges

(new/limited); set product status; assign a product to a drop. Stock decrements on paid order; sold-out variants show as sold out and block add-to-cart.

- **May be part of future extension — Low-stock alerts + bulk CSV import/export of catalogue.** *Why needed:* speeds up large catalogue updates and prevents accidental oversell. *Why it's not in v1:* the client's catalogue is small at launch; manual CRUD is sufficient and faster to ship.
- **Defaults:** "Configurable product links" implemented as full admin-managed products plus an optional external-link field per product (e.g. Instagram/marketplace) surfaced in `siteSettings /product`.

8.3 Drops & Sold-Out Browsing

- **v1:** Admin creates drops, assigns products, marks each drop **Current / Past / Sold-out**. Shop highlights the current drop; a **"Past Drops"** view lists previous/sold-out drops (fixes "make sold out tabs for the previous drops").
- **May be part of future extension — Scheduled auto-publish of a drop at a set date/time + countdown.** *Why needed:* drop culture thrives on timed releases; automates the launch moment. *Why it's not in v1:* requires a scheduler/cron and careful timezone handling; manual publish covers launch.
- **Defaults:** countdown timer component (already built) reused on the current drop where relevant.

8.4 Cart & Checkout

- **v1 — slide-out cart drawer:** adding to cart (or clicking the cart icon) opens a **drawer that slides in from the right**, with the **rest of the page dimmed/blurred** behind it (à la Carhartt). The drawer shows line items (image, name, variant, price, qty stepper, remove), an **"Add order note"** expandable field, a "Tax included · Shipping calculated at checkout" line, a primary **Checkout · RM total** button, and a **View Cart** link to the full cart page. Closes via the × or backdrop click.
- **Order note:** an optional free-text note the customer can add in the drawer (e.g. "please pack flat", "leave at guardhouse") — **saved with the order and shown to the admin** in the order detail / order alert.
- **v1 — checkout:** collects name, email, phone, address (incl. state for shipping zone). **Stripe Checkout (Cards + FPX + GrabPay). Flat shipping by zone — West vs East Malaysia rates, free over a configurable threshold** (rates set in admin). Discount code applied at checkout. **COD removed** (per client). Guest checkout requires email; registered checkout pre-fills from account.
- **May be part of future extension — Touch 'n Go eWallet via a Malaysian aggregator (ToyyibPay/Billplz/Curlec).** *Why needed:* TnG eWallet is widely used in Malaysia and Stripe

cannot process it. *Why it's not in v1:* it's a separate payment integration replacing/duplicating the Stripe layer; FPX already covers "pay directly from my bank," so it's not blocking for launch.

- **May be part of future extension — Shipping-rate logic by region / live courier rates.** *Why needed:* accurate postage at scale. *Why it's not in v1:* current flat/manual handling is acceptable for launch volume.
- **Defaults:** currency MYR, displayed RM 1,500.00 . Stripe one-time KYC uses the client's SSM + bank details.

8.5 Accounts & Guest

- **v1: Better Auth** customer accounts — sign up / sign in with **email+password or Google social login**. Register-or-guest choice at checkout. Registered customers get a **Profile page** (details + their 10% code, copyable) and an **Orders page** showing past, pending, and current orders with status + tracking. Guests provide email at checkout, receive an **order-confirmation email**, and track via the public order-lookup page (order number + email). Password reset via emailed link (Better Auth).
- **May be part of future extension — Saved addresses / multiple addresses, more social providers (Apple/FB).** *Why needed:* faster repeat checkout. *Why it's not in v1:* email/password + Google covers the stated need; extra providers are incremental.
- **Defaults:** Google as the only social provider in v1; customer role assigned automatically; superadmin role never self-assignable.

8.6 First-Purchase Offer, Email Capture & Welcome

- **v1 — two paths to a 10% code, one code per email:**
 - **Popup capture:** a popup prompts for email to get 10% off the first purchase; a one-time-use code is emailed automatically (Resend). Email saved to emailSubscriber .
 - **Account signup:** when a customer creates an account, a **welcome email with their 10% code** is sent, and the code is **shown + copyable on their Profile page**.
 - If the email already has a code (e.g. popup then signup), the **same code is reused** — never two codes per email.
- Code validated + marked used at checkout. **Popup trigger timing is an admin setting** (default: after ~5s or on scroll, once per visitor via cookie; client will finalise timing).
- **May be part of future extension — Newsletter campaigns / broadcast to subscribers.** *Why needed:* turns the captured list into repeat revenue. *Why it's not in v1:* needs campaign tooling + unsubscribe compliance; capture-and-store is enough for launch.
- **Defaults:** code prefix CRAZY... , 10%, 30-day expiry, one per email.

8.7 Order Alerts, Tracking & Transactional Email — v1 core

- **v1:** Per new (paid) order, an alert with customer, items, size/colour, quantity, total, placed date goes out via **one channel the client picks — Discord webhook OR owner email**. Only the chosen channel is built (not both). Customer gets an **order-confirmation email** regardless. Admin can attach a **courier name + tracking number** to an order; changing an order's status fires an **automatic status-change email** to the customer (e.g. "shipped" includes the tracking number). All order data stored (placed date, product type, size, colour, quantity, status, tracking, **customer order note**).
- **Why Discord is suggested (client picks one):** a Discord webhook gives an **instant push** to the owner's phone/desktop, **bypasses email spam/promotions filtering** (owner order alerts often get mis-sorted or throttled), turns a `#orders` channel into a **shared, searchable order feed**, and is near-zero setup (a single POST — no sending-domain verification). The email alternative gives a formal inbox record to forward to accounting. **Only one is built — the client chooses** at the start of the build; the other can be added later as a future extension if needed.
- **May be part of future extension — The second alert channel (whichever wasn't chosen), carrier tracking links / EasyParcel integration, customizable email templates.** *Why needed:* richer fulfilment + branding + redundancy. *Why it's not in v1:* the single chosen channel + manual tracking number + templated emails cover the core need at launch.
- **Defaults:** the chosen channel's config (Discord webhook URL or owner-email address) lives in `admin siteSettings`; status-change email copy templated per status.

8.8 Collab Page — v1 core

- **v1:** A **single, admin-configurable showcase page** for the gym collaboration — title, intro text, image gallery, and body content, all editable from the admin panel. **Server-rendered for SEO**. Not a multi-post blog engine.
- **May be part of future extension — Multiple collab entries with their own URLs (a real blog), categories/tags.** *Why needed:* if collaborations become frequent, each deserves its own indexable page. *Why it's not in v1:* the client wants one showcase page now, not a content engine.
- **Defaults:** one page, gallery + rich-text body managed in admin.

8.9 Community Photos — v1 core

- **v1:** A **Community page/tab** where the admin uploads **real-customer photos** (caption, ordering, publish toggle) to a responsive grid — fixes the client PDF's "under community tab, upload pictures of real customers." Server-rendered.
- **May be part of future extension — Instagram hashtag/feed auto-pull + customer photo submissions.** *Why needed:* keeps the wall fresh without manual upload. *Why it's not in v1:*

needs Instagram API access + moderation; admin upload covers the launch need.

- **Defaults:** manual admin upload; photos stored on Vercel Blob.

8.10 FAQs, Size Guide, Social & SSM Footer

- **v1: FAQ** page/section (admin-managed Q&A). **Size guide** modal on PDP/Shop, Gymshark-style measurement table. **Social links** (Instagram, email, etc.) configurable in admin and shown in footer/nav. **SSM business number listed in the footer.** Updated per-product descriptions (client to provide copy).
- **May be part of future extension — Per-category / per-product size charts, unit toggle (cm/in).** *Why needed:* apparel sizing varies by garment. *Why it's not in v1:* one well-built universal chart covers the current 3-product catalogue.
- **Defaults:** one universal size guide using Gymshark's table as the template; social/SSM stored in `siteSettings`.

8.11 Admin Panel & Access Control — v1 core

- **v1: Exactly one superadmin -role user**, seeded once via Better Auth, **no admin signup route and the admin role is not self-assignable** (safeguarded — customer signups always get the `customer` role). Admin login via Better Auth (email/password), **password recovery via emailed reset link** to the locked owner email. Admin dashboard to manage: products/stock, drops, orders (view/filter/update status + tracking, **read the customer's order note**, CSV export), the Collab page, Community photos, FAQs, and site settings. Sessions expire; logout supported.
- **May be part of future extension — Editable roles / additional staff accounts with per-page permissions.** *Why needed:* if the client grows a team, delegated access avoids sharing the superadmin login. *Why it's not in v1:* the client explicitly wants a single account at launch; multi-role adds RBAC surface that isn't needed yet.
- **Defaults:** superadmin seeded once (env-provided email); role gating enforced server-side on every admin route; cannot be self-deleted.

8.12 SEO

- **v1 (baseline):** server-rendered product and blog pages, clean per-page `<title>` /meta + Open Graph, `sitemap.xml`, `robots.txt`, semantic markup, fast Core Web Vitals via Next image optimization.
- **May be part of future extension (full pass) — Product (Offer) + Article structured data (JSON-LD), breadcrumb schema, canonical tuning, hreflang if multilingual, richer OG imagery, analytics/Search Console wiring.** *Why needed:* structured data drives rich results and ranking for a retail catalogue. *Why it's not in v1 (client's choice):* the SSR baseline already fixes the SPA's core indexing problem; the deep schema pass is a candidate for once content/catalogue stabilises.

- **Defaults:** baseline metadata baked in as pages are built.

9. Client Change-List Coverage (from "Crazywork Website Changes.pdf")

Client request	Where handled	v1?
Click product → show product directly (no scroll-up)	§8.1 Storefront	✓
Add size guide (Gymshark sample)	§8.10	✓
Email popup → 10% first-purchase, one-time code via email	§8.6	✓
Register account OR continue as guest	§8.5	✓
Registered: see past/pending/current order status	§8.5	✓
Guest: email at checkout → confirmation email + order lookup	§8.5 / §8.7	✓
Store order (date, type, size, colour, qty) + email owner per order	§8.7	✓
Community tab: real customer photos	§8.9	✓
Remove COD	§8.4	✓
Add FAQs	§8.10	✓
Add social links (Instagram, email...)	§8.10	✓
Change per-product descriptions	§8.2 (client provides copy)	✓
Sold-out tabs for previous drops	§8.3	✓
Add-to-cart popup on scroll within product	§8.1	✓
Change "quick view" → "add to cart"	§8.1	✓

Additional client/owner asks also covered: Vercel migration, Neon DB, new admin panel, clean light UI, Collab showcase page, Community photo page, Better Auth with Google social login, welcome email + profile-page code, slide-out cart drawer with order note, sticky add-to-cart bar with size/colour selectors, flat West/East shipping, order tracking + status emails, Discord webhook,

configurable product links, single safeguarded superadmin, SSM in footer, light/peach + orange theme.

10. User Stories

Shopper (guest & registered)

1. As a shopper, I want a product to open directly on its detail view, so that I don't have to scroll up to see what I clicked.
2. As a shopper, I want a size guide modal, so that I can pick the right size with confidence.
3. As a shopper, I want a sticky "Add to Cart" bar as I scroll a product, so that I can add it without scrolling back up.
4. As a shopper, I want "Add to Cart" instead of "Quick View," so that the primary action is buying.
 - 4a. As a shopper, I want a slide-out cart drawer (with the page dimmed behind it) where I can review items and checkout, so that I don't lose my place on the page.
 - 4b. As a shopper, I want to add an order note with special requests, so that the seller knows how I'd like my order handled.
5. As a first-time visitor, I want a 10%-off code emailed to me for signing up, so that I'm rewarded for my first purchase.
6. As a shopper, I want to choose between creating an account or checking out as a guest, so that I'm not forced to register.
7. As a guest, I want to enter my email at checkout and get a confirmation email, so that I have a record of my order.
8. As a shopper, I want to pay by card, FPX, or GrabPay, so that I can use my preferred Malaysian payment method.
9. As a shopper, I want to see which sizes/colours are sold out, so that I don't try to buy unavailable stock.
10. As a shopper, I want to browse the current drop and past (sold-out) drops, so that I can see the brand's history and what's live now.
11. As a shopper, I want to read FAQs, so that I can answer my own questions before buying.
12. As a shopper, I want to see real customer photos, so that I trust the product and brand.
13. As a shopper, I want to read the gym-collaboration blog, so that I feel part of the community.
14. As a shopper, I want to find the brand's Instagram and contact links, so that I can follow and reach them.

Registered customer

15. As a registered customer, I want my details pre-filled at checkout, so that buying is faster.
16. As a registered customer, I want to see my past, pending, and current orders with status, so that

I can track everything in one place.

17. As a registered customer, I want to log out, so that my account stays secure on shared devices.

Owner / Superadmin

18. As the owner, I want one secure admin account that can't be duplicated, so that only I control the store.

19. As the owner, I want to add, edit, and remove products, so that I manage my catalogue without a developer.

20. As the owner, I want to set stock per size and colour, so that the store sells out accurately.

21. As the owner, I want to edit product descriptions and prices, so that listings stay current.

22. As the owner, I want to group products into drops and mark them current/past/sold-out, so that browsing reflects my release model.

23. As the owner, I want to view, filter, update, and export orders, so that I can fulfil and reconcile sales.

24. As the owner, I want a new-order alert on my chosen channel (Discord ping or email), so that I never miss a sale.

25. As the owner, I want to publish blog posts about gym collaborations, so that I grow the community.

26. As the owner, I want to upload community photos, so that I showcase real customers.

26a. As the owner, I want to see the customer's order note on each order, so that I can honour their requests when packing.

27. As the owner, I want to manage FAQs, social links, the SSM number, and the Discord webhook, so that I control site content and settings.

28. As the owner, I want my product images hosted on my own infrastructure, so that I don't depend on Manus staying online.

SEO / system

29. As the owner, I want product and content pages server-rendered with proper metadata and a sitemap, so that customers can find my store on Google.

30. As a shopper, I want to sign in with Google, so that I don't have to create another password.

31. As a new account holder, I want a welcome email with my 10% code and the same code visible on my profile, so that I can find and use it easily.

32. As a shopper, I want a sticky bar with size and colour pickers when I scroll a product, so that I can choose a variant and add to cart in one tap.

33. As the owner, I want to attach a tracking number and have the customer auto-emailed on status changes, so that buyers self-serve their delivery status.

11. Implementation Decisions

- **Port to Next.js App Router**; reuse `shadcn ui/*`, Tailwind, brand tokens, framer-motion, Stripe + order/discount logic. Replace Vite, Wouter, Express, and all Manus `_core` services.
- **Prisma + Neon Postgres** replaces Drizzle + MySQL; schema rewritten per §7 (variants and order items normalized).
- **Hono** API mounted as a Next catch-all route handler; type-safe client via `hono/client`.
- **Products move from hard-coded files into the database**; the admin panel is the single source of truth for catalogue, stock, and drops.
- **Per size + colour variant stock**; stock decremented on payment confirmation (Stripe webhook).
- **Better Auth** for all auth: customers via email/password + **Google social**; **single seeded superadmin -role user** (admin role not self-assignable, no admin signup, cannot be self-deleted); admin + customer password recovery via emailed reset link; guest checkout = email only.
- **Account signup sends a welcome email with a 10% code** (one per email, reused if already issued via popup); code shown + copyable on the customer Profile page.
- **Sticky add-to-cart bar with size + colour selectors** on PDPs.
- **Per size + colour variant stock; flat West/East Malaysia shipping** with free-over-threshold, configurable in admin.
- **Order tracking** (courier + tracking number) + **automatic status-change emails** to the customer.
- **Stripe Checkout** (Cards + FPX + GrabPay) now; payment layer abstracted so a **TnG-capable aggregator** can be added later without reworking the order model.
- **Resend** for transactional email (welcome/OTP discount, order confirmation, status-change, and the owner alert *if* email is the chosen alert channel); **one owner-alert channel built — Discord webhook OR owner email, client's choice** — configured in `siteSettings`.
- **Vercel Blob** for all uploads; existing CloudFront product images re-hosted before Manus is decommissioned.
- **Baseline SEO** (SSR, metadata, OG, sitemap, robots) in v1; full structured-data pass is a future extension.

12. Testing Decisions

Good tests assert **external behaviour**, not implementation details. Prior art exists in the current repo (`server/stripe.test.ts` , `server/auth.logout.test.ts`) using Vitest — carry that forward.

Target for tests (deep modules with stable interfaces):

- **Stock / variant module** — add-to-cart blocked on zero stock; stock decrements correctly on paid order; sold-out states derived correctly.
- **Discount-code module** — generate (one per email), validate (invalid/used/expired), apply (marks used). Carries over from existing logic.
- **Order creation + webhook** — order persists with correct items/variants/total; status transitions; owner alert + confirmation fire on paid.
- **Auth / safeguard** — customer signup always gets `customer` role; admin role not self-assignable; single superadmin only; Google social login round-trips; protected admin routes reject non-superadmin requests.
- **Pricing / checkout total** — line items, discount, and total computed correctly before handing to Stripe.

Confirm with the client which of these they want covered first; the stock, discount, and order/webhook modules are the highest-value targets.

13. Out of Scope (v1)

- Touch 'n Go eWallet (future extension via aggregator).
- Multi-admin / editable roles & permissions.
- **Full multi-post blog engine** (v1 ships a single Collab page instead).
- **Instagram auto-feed / customer photo submissions for the Community page** (v1 is admin-uploaded photos).
- Social providers beyond Google (Apple/Facebook); saved/multiple addresses.
- Wishlist, real verified-purchase reviews, newsletter campaigns.
- Live courier shipping rates (EasyParcel etc.); v1 uses flat West/East rates.
- Full SEO structured-data pass; multilingual storefront.
- Scheduled/auto-publishing drops with automated countdowns.
- Migrating historical Manus orders/customers (starting fresh).

14. Open Questions to Confirm with Client

Logistics / assets the client must provide (not design decisions):

1. **Domain** — what custom domain do we deploy to (e.g. `crazywork.my`)? Who holds the registrar/DNS?
2. **Stripe account** — Stripe Malaysia account + SSM doc + bank details for KYC; FPX/GrabPay enabled in the dashboard.
3. **Google OAuth** — Google Cloud OAuth client ID/secret for the "Sign in with Google" flow (Zedech can set this up if given access).
4. **Owner alert targets** — the email address and the Discord channel/webhook for order alerts.

5. **Resend** — verified sending domain/email for transactional mail.
6. **Product copy & images** — new per-product descriptions + higher-quality photos (or confirm AI-generated imagery is acceptable, and for which products).
7. **SSM number** — exact registration number/string to display in the footer.
8. **Collab content** — copy + images for the Collab showcase page.

Still to confirm:

9. **Discount popup timing** — client to finalise (built as an admin setting; default after ~5s / on scroll, once per visitor).
10. **Size guide** — confirm one universal Gymshark-style chart is acceptable for the current catalogue.
11. **Community photos** — client to supply the real-customer photos (with permission to publish) to seed the Community page.

15. Rough Delivery Plan (2–3 focused days)

- **Day 1 — Foundation:** scaffold Next.js + Hono + Prisma + Neon; **Better Auth** (email/password + Google + superadmin seed); port shadcn components + brand tokens; Prisma schema + seed (superadmin, site settings); re-host the 3 products' images to Vercel Blob; products/variants/drops into DB.
- **Day 2 — Storefront + Commerce:** restyle Home/Shop/PDP/Cart/Checkout to a light, clean theme; sticky add-to-cart bar with size/colour selectors, size guide, direct-to-product, sold-out states; Stripe Checkout (Cards/FPX/GrabPay) + webhook; flat West/East shipping; discount popup + welcome/OTP email + profile-page code; order confirmation + the chosen owner-alert channel (Discord OR email); guest order lookup + account order history.
- **Day 3 — Admin + Content + Ship:** admin panel (product/stock CRUD, drops, orders + tracking + status-change emails + CSV, Collab page, Community photos, FAQ, settings); Collab + Community + FAQ public pages; baseline SEO (metadata, sitemap, robots, OG); footer (social + SSM); QA, deploy to Vercel, smoke test the golden path.

The plumbing is mechanical and fast; the real time sink is **clean, light UI polish across every page** plus the **admin CRUD surface**. Scope is locked tightly to hit the window; anything in §13/§14 that expands scope should be treated as a future extension.
